Table 2: Outcomes of runs evolving 9 gene GRNs, with the leftmost column depicting the environmental stimuli used and the topmost row the desired output behavior for every run. The data cells show the final deviation averaged over 10 repetitions with 250 generations each, ± its standard error and the best adapted GRNs deviation as well as a graph of its lifetime behavior. Note that during the runs blackouts occurred randomly and the regularity is only to ease reading of this table.
Table 3: As in table 2, but this time results from runs with 5 gene GRNs are shown.
